

Introducing at
Interpack 2014

Our new reliable entry model overwrapper; the SE40

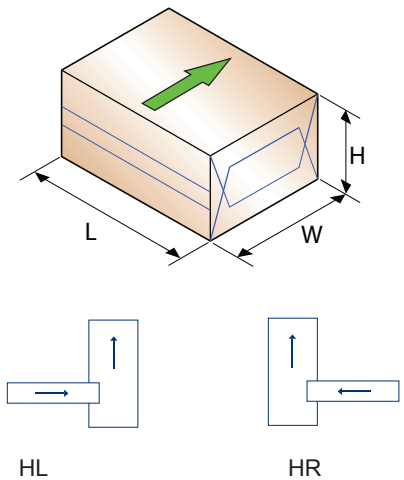

More and more customers in emerging markets are requesting a high quality packaging done on a low cost, yet reliable machine which provides an excellent product presentation.

By taking a critical look at our production process and by applying some recently developed components from suppliers like Siemens, we were able to design the Sollas SE40; a highly cost effective fully automatic overwrapper for speeds up to 40 per minute.

With the SE40 we have managed to create a high quality overwrapper for a limited investment. This gives the customer the opportunity to purchase an original Sollas machine without compromising on quality, flexibility and reliability.

Type	Sollas SE40
Size range L	45 - 300 mm
W	40 - 240 mm
H	16 (7*) – 96 (125 – 140 *)
